

MATERIALS HANDLING

OUR CLIENTS

All wheels have one thing in common – they are round. Looking beyond this, however, every area of application has its own specific requirements in terms of size, materials and load capacity. Therefore, since 1946, we have been developing wheels and castors to meet the constantly increasing demands of the market: from individual customised items to standardised large batches.

Our high standards, quality and innovative strength have made us one of the world's leading manufacturers of wheels, pallet rollers, press-on tyres and swivel and fixed castors. Our products are used all over the globe by all major car manufacturers and major materials handling suppliers. With a catalogue of more than 30,000 items, we move an enormous range of machines and systems for intralogistics.

High-quality wheel materials for your applications

The more diverse and challenging the areas of application of our wheels and castors, the broader the range of wheel-tread materials we offer. One of our main area of focus are VULKOLLAN®* and polyurethane elastomers, all of which are produced by a hot-casting process. These are non-marking and they stand out for their low starting and rolling resistance, high dynamic load capacity, and good abrasion and tear resistance.

We also offer a wide range of wheel-treads made of thermoplastic polyurethane, polyamide and rubber. These are particularly suitable for industrial castors used in factory environments for the internal transport of goods in indoor and outdoor areas.

 * VULKOLLAN® and DESMODUR® are registered trademarks of the Covestro Group.

VULKOLLAN® 93 Shore A / hydrolysis-stabilized VULKOLLAN®

VULKOLLAN® is a highly elastic, cross-linked polyurethane elastomer based on DESMODUR® 15*. Wheels and castors made from VULKOLLAN® have a long service life and can support heavy loads at a high speed. Their excellent mechanical properties include high dynamic load capacity, high abrasion resistance and tear propagation resistance, the highest modulus of elasticity of all elastomers, high mechanical wear resistance, high impact resilience and low compression set.

For applications in tropical environments, we recommend VULKOLLAN® hydrolysis-stabilized.

Areas of application:

- Electric monorail systems
- Lifting equipment
- Turntables
- Hydrolysis-stabilized

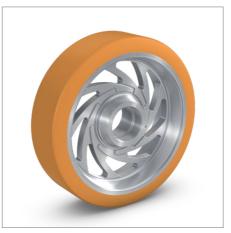

VULKOLLAN® 95 Shore A

VULKOLLAN® 95 Shore is a highly elastic polyurethane elastomer based on DESMODUR® 15 for demanding and dynamic areas of application. The excellent mechanical properties of the material include a long service life, very high dynamic load capacity, very high abrasion resistance and wear propagation resistance, very high mechanical wear resistance and very low compression set.

We recommend VULKOLLAN® 95 Shore A for use in the transport of very heavy loads and at high speeds.

Areas of application:

- Heavy-duty electric monorail systems
- Stacker cranes and retrieval units
- Automated small parts warehouses

PEVOPUR®

PEVOPUR® is a high-quality polyurethane elastomer which offers good dynamic load capacity, high elasticity, good mechanical wear resistance and good compressive set characteristics. PEVOPUR® is also significantly more resilient than rubber. This makes the material especially suitable for applications involving medium loads and moderate speeds, and it is ideal for use in tropical climates.

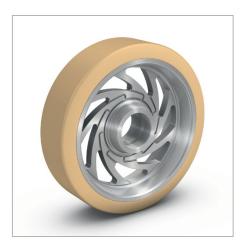

Areas of application:

- Skid idlers
- Push skid systems

High-quality wheel materials for your applications

PEVODYN®

PEVODYN® is a new high-quality polyurethane elastomer that we have developed with a long service life, offering significantly reduced starting and rolling resistance, high dynamic load capacity and high energy efficiency. Therefore, the material is particularly suitable for intralogistic applications involving the transport of large loads at a high speed. Thanks to its

hydrolysis resistance, PEVODYN® is ideal for use in tropical climates.

Areas of application:

- Electric monorail systems
- Lifting equipment

PEVODYN® Soft

PEVODYN® Soft 78 Shore A is a new high-quality polyurethane elastomer that we have developed with high dynamic load capacity and significantly reduced starting and rolling resistance. The excellent mechanical properties of the material include high cutting, tearing and abrasion resistance as well as high energy efficiency. Thanks to its good noise reduction and vibration damping, PEVODYN® Soft is particularly suitable for the transport of medium loads at high speeds on surfaces

where care is needed. And with its hydrolysis resistance, the material is ideal for use in tropical climates.

Areas of application:

- Shuttle systems
- Automated small parts warehouses

PEVOLON®

PEVOLON® is a thermoplastic material based on polyamide that stands out for its non-marking properties, good chemical resistance, high abrasion resistance, low rolling resistance and a high load capacity of up to two tonnes. Furthermore, the material is very resistant to heat and cold (-40°C to +90°C), although the load capacity is reduced for temperatures above 35°C.

Areas of application:

- Push skid systems
- Electric monorail systems
- Wet area systems

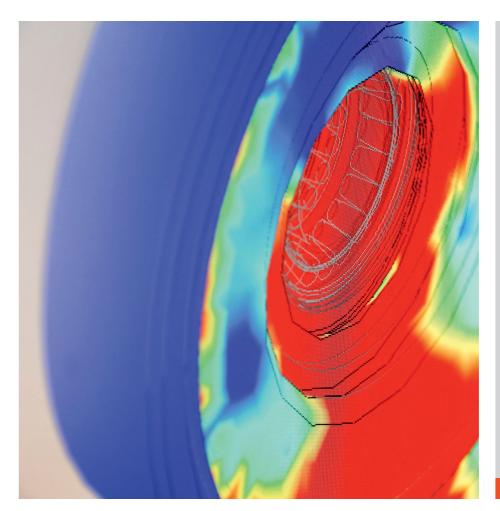

PEVOTHAN®

PEVOTHAN® is a high-quality thermoplastic polyurethane elastomer with excellent characteristics, including non-marking properties, high abrasion resistance, good damping power, loading capacities of up to 500 kg and temperature resistance of between -20°C and +80°C.
PEVOTHAN® is also widely resistant to diluted acids and alkalis as well as mineral greases and oils. Thanks to these properties, PEVOTHAN® is superior to all

normal rubber wheels and is particularly recommended for sensitive surfaces.

Areas of application:

- Electric monorail systems
- Shuttle systems

PEVOTEC®

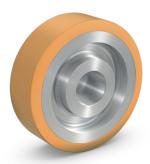

Behind the name PEVOTEC® is an extensive range of special polyure-thane elastomers that can be used under extreme operating conditions. Depending on the task at hand, we develop the ideal wheel material for you on this basis by adapting the chemical and physical properties to suit your requirements.

Disruption-free in continuous operation

VULKOLLAN® guiding wheels

Our wheels and castors for electric monorail systems (EMS) have proved their worth in production and distribution logistics around the world. When it comes to driving, bearing loads and guiding equipment on rails, we offer a comprehensive range of high-quality, high-performance products. From the transport of light and heavy goods to complete vehicles in the final stages of assembly in the automotive industry, our wheels and castors ensure problem-free operation.

C45 single-flanged wheels

PEVOLON® double-flanged wheels

For use on transport carts, trolleys and tugger trains in areas such as the automotive industry, we offer a comprehensive range of swivel and fixed castors with a large selection of wheel-tread materials. These ensure safe transport even for heavy loads and provide a convincing solution for demanding applications, thanks to their superior performance.

For rail conveyor systems in all areas of industry, we supply flanged wheels, guiding wheels and drive wheels from PEVOLON®, steel and cast iron. For special requirements, we also produce flanged wheels where the tread is coated with PEVOPUR® or VULKOLLAN®.
